# Contents

0	Summary	viii
1	Commercial pressures are reviving interest in 3G-network sharing	1
1.1	Early interest in network sharing subsided, but MNOs have new reasons to reconsider this approach	1
1.2	MNOs are examining ways to reduce costs	2
1.3	MNOs are faced with extensive investment requirements	3
1.4	MNOs must expand 3G coverage to match 2G coverage	5
1.5	3G enhancements will require substantial investment	7
1.6	Infrastructure equipment vendors have been quick to provide network-sharing solutions	8
1.7	Regulators have supported a degree of network sharing	9
1.8	Major MNOs have announced network-sharing agreements	9
2	MNOs that lead the network-sharing trend will enjoy major benefits	12
2.1	Network sharing can take many forms	12
2.2	Network sharing can have significant cost benefits for MNOs	15
2.3	Network sharing can enable MNOs to accelerate roll-out	20
2.4	Network sharing enables MNOs to deploy LTE, and they could gain additional benefits by pooling spectrum	22
2.5	Network sharing gives MNOs greater influence over network infrastructure vendors	24
2.6	Network sharing provides competitive advantage and avoids competitive disadvantage	24
2.7	Network sharing will become common in developed markets	25
3	There are nine critical success factors for network sharing	26
3.1	MNOs must heed the lessons from early adopters	26
3.2	Speed is of the essence, but agreements cannot be rushed	27
3.3	MNOs need to select appropriate partners, with the optimal strategic match	27
3.4	Partners in a sharing agreement should have clear, common goals	29
3.5	MNOs should have a robust agreement that adequately covers commercial, technical and legal issues	30
3.6	MNOs should adopt a carefully planned, phased approach that minimises risk and maximises short-term benefits	32

3.7	Network-sharing partners need a flexible agreement that allows for service and technological differentiation	32
3.8	MNOs must work with regulators to avoid anti-competitive behaviour	33
3.9	MNOs need an effective strategy towards legacy 2G network infrastructure	34
3.10	Effective vendor support is essential	35
4	Network sharing has profound implications for MNOs, vendors, regulators and others	37
4.1	The benefits of network sharing are applicable in all markets	37
4.2	Network sharing brings new opportunities for MNOs and increases their focus on service differentiation	38
4.3	Network sharing will radically change the network infrastructure business	39
4.4	Regulators need to prepare for new competition issues and a changing industry structure	40
4.5	There will be new opportunities for third parties to design, build and operate shared networks	41
	<b>Actions</b>	<b>42</b>
	Market intelligence services from Analysys Research	46
	Reports from Analysys Research	47
	Custom Research: meeting your information needs	48

## List of Figures and Tables

<b>Figure 0.1:</b>	Incremental capex and opex over ten years for a 3G-only MNO and a 2G/3G MNO, with and without 3G RAN sharing	ix
<b>Figure 1.1:</b>	Monthly mobile service ARPU in Western Europe, 1998–2007	2
<b>Figure 1.2:</b>	MNOs' investment requirements	3
<b>Figure 1.3:</b>	Mobile-originated voice traffic as a proportion of total voice traffic in Western Europe, 1Q 2005–4Q 2008	6
<b>Table 1.1:</b>	Major enhancements to the UMTS radio interface, defined by 3GPP	8
<b>Figure 2.1:</b>	Network and business elements that MNOs could share	13
<b>Table 2.1:</b>	Comparison of the three broad categories of network sharing	14
<b>Figure 2.2:</b>	Network expansion options for a 3G-only MNO and a 2G/3G MNO	16
<b>Figure 2.3:</b>	Incremental capex and opex over ten years for a 3G-only MNO and 2G/3G MNO, with and without 3G RAN sharing	17
<b>Figure 2.4:</b>	Network expansion options for two 2G/3G MNOs	18
<b>Figure 2.5:</b>	Incremental capex and opex over ten years for two 2G/3G MNOs, with and without 3G RAN sharing	19
<b>Figure 2.6:</b>	Comparison of strategic investment options enabled by independent 3G RAN ownership and 3G RAN sharing	20
<b>Figure 2.7:</b>	Hutchison 3G's number of 3G base stations in the UK, December 2003–December 2009 (assuming network sharing from 2008)	21
<b>Figure 2.8:</b>	Estimated downlink data rates achieved by LTE in different radio conditions	23
<b>Figure 2.9:</b>	Estimated network capacities achieved by LTE in different operating bandwidths with a typical 10 000 base station network deployment	23

- Figure 3.1:** Total incremental cost of different RAN-sharing scenarios for a typical 10 000 base station network deployment 34
- Figure 4.1:** Total base station equipment sales over ten years to two typical MNOs for different RAN-sharing scenarios 39

## Authors

**Dr Mark Heath** and **Dr Alastair Brydon** are founders of Sound Partners Ltd and authors of more than 35 reports from Analysys Research, including: *3G Network Evolution from 2007 to 2012: HSPA+, LTE, WiMAX and femtocells*; *The Business Case for Picocells and Femtocells in the Enterprise Market*; *Femtocells in the Consumer Market: business case and marketing plan*; *How to Succeed with Fixed-Mobile Convergence*; *The Acceleration of Fixed-Mobile Substitution in Western Europe: facts and figures*; *Seizing the Opportunities from Enterprise Mobility*; *The Future of the Global Wireless Industry: scenarios for 2007–12*; *The World's Top Ten Non-voice Services for MNOs*; *MNO Strategies for Fixed Broadband*; *The Business Case for WiMAX*; *Forecasting the Commercial Impact of Wireless VoIP in the USA and Western Europe*; and *Evaluating the Options for Mobile TV and Radio Broadcasting in Western Europe*.

Mark is Director of Research at Sound Partners Ltd. In the past, he has held a number of marketing and business development roles in Nokia, ultimately becoming responsible for strategy and business development across Europe. Previously, Mark was responsible for business planning at BT Cellnet in the UK, after spending six years at BT in wireless systems research and development. He holds BSc and PhD degrees from the University of Leeds, winning the University prize for his research in telecoms. Mark also holds an MBA, graduating as top student from Henley Management College.

Alastair is CEO of Sound Partners Ltd. Prior to joining Sound Partners, he reported to Nokia's European management team and worked with many of Nokia's customers to implement market firsts ranging from the introduction of prepaid mobile tariffs to new mass-market content services. Previously, Alastair worked in a number of roles for the BT Group, focusing on the evolution of wireless services, networks and technologies. He also contributed to international research and standardisation of GSM, DECT and 3G. Alastair holds BSc and PhD degrees from UMIST, where he was awarded the IEE Prize for top student.

**Andrew Parkin-White** (Principal Analyst) has gained a deep understanding of the strategic and operational issues facing the mobile industry during his 17-year career. Formerly at Ovum, where he had been Managing Director of Consulting, Executive Board Director and, prior to that, leader of mobile research and consulting activities, Andrew's extensive experience of working in senior operations roles for operators and vendors is combined with a first-class research and consultancy background. He has also held managerial roles in strategic planning and marketing with organisations including BT, Marconi and Orange, and was a Principal Consultant at KPMG before moving to Ovum.

# Reports from Analysys Research

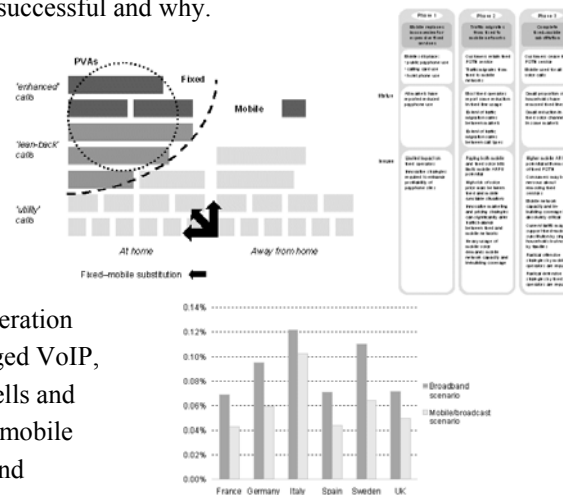

Analysys Research's reports are designed to keep you up to date with industry developments and how they affect players in the telecoms value chain – from fixed and mobile network operators, to software and equipment vendors, and content providers and distributors. Our reports will help you to:

- explore the factors that are driving market evolution
- understand how industry trends will affect your business
- define and evaluate your strategic options using decision frameworks and scenarios
- identify where opportunities lie for future growth
- find out which players are currently successful and why.

Our publication programme offers more than 25 reports a year, covering all the key issues affecting the telecoms industry and the latest hot topics. Recent reports have provided expert analysis of such topics as 3G-network sharing, next-generation network architecture, hosted and managed VoIP, mobile media and entertainment, picocells and femtocells, fixed–mobile convergence, mobile advertising, quadruple-play strategies and next-generation telecoms IT, and have included country market forecasts for fixed and mobile telecoms.

Each report is accompanied by an Excel spreadsheet containing the forecasts or other key data discussed in the report, presented in an easy-to-use format. All reports are offered with Analyst Support, allowing you direct consultation with the author.

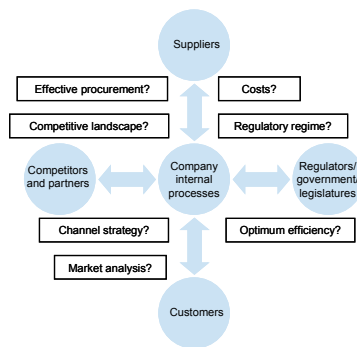

Shop online at <http://research.analysys.com/store> or, for information about our report subscription packages, please contact our Sales and Customer Service team on +44 (0)1223 460600 or email us at [research@analysys.com](mailto:research@analysys.com).

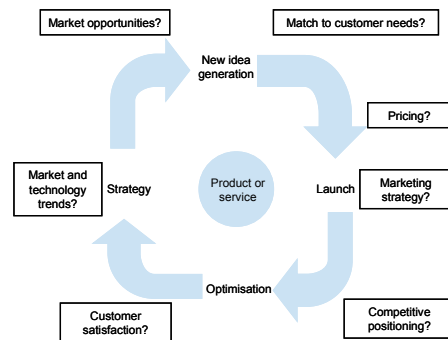

# Custom Research: meeting your information needs

Analysys Research has developed its portfolio of Custom Research services in response to customer demand for bespoke market intelligence, when more data is needed than is found in an off-the-shelf report or database, when there are complex questions about specific companies or markets that need to be answered, or when analysis needs to be tailored.

Custom Research can deliver real value when an organisation needs to answer specific questions about how it is positioned in the market, and how to optimise performance at various stages of the product or service lifecycle.

*Understand how your company is positioned*

*Optimise performance in the product or service lifecycle*

In answering our clients' questions, we bring a wealth of understanding of markets, and of techniques and services including:

- desk research, data collection and interpretation
- benchmarking services
- quantitative and qualitative surveys
- market sizing and forecasting
- competitor and partner profiling
- white papers, presentations and workshop facilitation
- event and trend analysis
- procurement assistance.

For more information on Custom Research services from Analysys Research, or to discuss how we could help you to meet your specific information needs, please contact our Custom Research team on +44 (0)1223 460600 or email us at [custom@analysys.com](mailto:custom@analysys.com).

# Analysys Consulting

Analysys Consulting is a leading international telecoms and digital media consultancy. We draw on our unparalleled industry experience to deliver results that enable our clients to compete and grow in these markets, as well as to exploit new opportunities.

Our experience, influence and unrivalled knowledge base are recognised globally – which is why we have been involved in some of the world's largest telecoms projects and in transactions worth billions of dollars.

For more than 20 years, we have helped to shape the telecoms industry through our extensive work on policy, regulation and finance. We have worked with most of the sector's leading players, often at board level, to:

- determine strategy
- advise on merger and acquisition activity
- optimise tariffing of new and existing services
- identify and launch new business ventures
- improve profitability and cashflow by streamlining key operational processes.

Analysys Consulting services include:

- strategy and marketing
- pricing strategy
- scenario planning
- economic modelling
- due diligence
- licence awards
- mergers and acquisitions
- regulation
- interconnect
- spectrum pricing
- STEM (Strategic Telecoms Evaluation Model).
