Contents

0	Summary	vii
1	Despite vendor enthusiasm, few business cases for WiMAX will be viable	1
2	Business cases for WiMAX showing attractive returns are based on optimistic assumptions	2
2.1	WiMAX addresses important weaknesses of fixed wireless technologies, and deployment plans are now emerging	2
2.2	The WiMAX Forum has produced business cases that show attractive opportunities in a variety of market situations	4
2.3	A small number of critical factors in the WiMAX business case will make the difference between success and failure	7
2.4	Only a small number of WiMAX business opportunities may have viable long-term business cases	13
3	WiMAX will take a long time to deliver strong returns in developing countries	15
3.1	Limited competition from fixed networks in developing countries bolsters the business case for WiMAX	15
3.2	WiMAX service growth will be slowed by low disposable income, lack of PCs and growing strength of cellular services	16
3.3	Slow take-up and low ARPU could damage the business case for WiMAX in developing markets	19
3.4	Potential WiMAX operators in developing markets must select their targets with care	22
4	In rural areas of developed markets, the business case is weak	23
4.1	Less developed fixed broadband services could bolster the business case for WiMAX in rural areas of developed countries	23
4.2	The rapidly growing reach of DSL services in rural areas will encroach on the opportunities for WiMAX	24
4.3	Growing competition from DSL will damage the business case for WiMAX in most rural areas	26
4.4	Potential WiMAX operators must be aware of the changing competitive landscape in rural areas of developed markets	29

5	In developed markets direct competition will rarely be viable	30
5.1	WiMAX will struggle to compete with DSL services from incumbent operators, retail service providers and local loop unbundlers	30
5.2	In an urban area of a developed market getting a good return from WiMAX will be a challenge	33
5.3	When competing with DSL in urban areas of developed markets WiMAX will only be viable in exceptional circumstances	35
5.4	It is unlikely that mobile operators will embrace WiMAX unless all other options are closed	36

Table 5.2:	Mobile operators’ options for offering Internet access services to homes and workplaces	37

Authors

Dr Mark Heath and **Dr Alastair Brydon** are founders of Sound Partners Ltd and authors of more than 20 reports from Analysys Research, including *Forecasting the Commercial Impact of Wireless VoIP in the USA and Western Europe*, *Pricing Mobile Services for Success: towards a bundled future*, *Evaluating the Options for Mobile TV and Radio Broadcasting in Western Europe*, *Lessons from the Japanese and South Korean Mobile Markets: handsets, services, content and pricing*, *Prospects for the Evolution of 3G and 4G*, *Scenarios for the Evolution of the Wireless Industry in Europe to 2010 and Beyond*, *Accelerating Fixed-Mobile Substitution: detailed operator case studies*, *Delivering Strategic Benefits with IP Multimedia Subsystem (IMS)*, *The Future of MVNOs in the 3G Era* and *The World's Top Ten Wireless Services*.

Alastair is CEO of Sound Partners Ltd. Prior to joining Sound Partners, Alastair reported to Nokia's European management team and worked with many of Nokia's customers to implement market firsts ranging from the introduction of prepaid mobile tariffs to new mass-market content services. Previously, Alastair worked in a number of roles for the BT Group, focusing on the evolution of wireless services, networks and technologies. He also contributed to international research and standardisation of GSM, DECT and 3G. Alastair holds BSc and PhD degrees from UMIST, where he was awarded the IEE Prize for top student.

Mark is Director of Research at Sound Partners Ltd. Mark has held a number of marketing and business development roles in Nokia, ultimately becoming responsible for strategy and business development across Europe. Previously, Mark was responsible for business planning at BT Cellnet in the UK, after spending six years at BT in wireless systems research and development. Mark holds BSc and PhD degrees from the University of Leeds, winning the University prize for his research in telecommunications. Mark also holds an MBA, graduating as top student from Henley Management College.

Alex Zadvorny (Senior Analyst) specialises in European mobile markets and has written and contributed to Analysys Research reports, including *Forecasting the Commercial Impact of Wireless VoIP in the USA and Western Europe*, *Pricing Mobile Services for Success: towards a bundled future*, *Evaluating the Options for Mobile TV and Radio Broadcasting in Western Europe*, *Making a Success of the Mobile Content Value Chain*, *The Western European Mobile Market: trends and forecasts 2006–11* and *The Central and Eastern European Mobile Market: trends and forecasts 2006–11*. He has also worked on a number of strategic custom projects. Having begun his career in Ukraine, Alex worked as an equity analyst in London for several years before joining Analysys. As well as a degree in Economics, he holds an MBA from INSEAD in France.

Acknowledgements

The authors would like to thank all those who assisted in the preparation of this report, especially Ross Pow and Andrew Wright for their suggestions and opinions, Sarah Peake and Claire Varley for editorial support, and Andy McKinnon (Motorola) for an interview.

Disclaimer

Figures and projections contained in this report are based on publicly available information only and are produced by Analysys Research Limited independently of any client-specific work within the Analysys Mason Group. The opinions expressed are those of the stated authors only.

Analysys Research Limited maintains that all reasonable care and skill have been used in the compilation of this publication. However, Analysys Research Limited shall not be under any liability for loss or damage (including consequential loss) whatsoever or howsoever arising as a result of the use of this publication by the customer, his servants, agents or any third party.

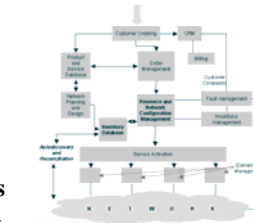

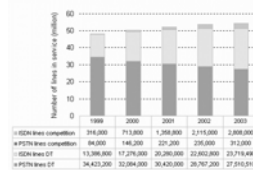

Glossary of terms

3G	Third Generation Mobile System	IEEE	Institute of Electrical and Electronics Engineers
3G LTE	Third Generation Long-Term Evolution (also known as 'Super 3G')	I-HSPA	Internet High-Speed Packet Access
ADSL	Asynchronous Digital Subscriber Line	IMS	IP Multimedia Subsystem
ADSL2+	Asymmetrical Digital Subscriber Line 2+ (ITU-T G.992.5; 25 Mbit/s downstream rate)	IP	Internet Protocol
ARPU	Average Revenue Per User	IPTV	Internet Protocol Television
CDMA2000	3G variant of Code-Division Multiple Access	IRR	Internal Rate of Return
CPE	Customer Premises Equipment	ISP	Internet Service Provider
DSL	Digital Subscriber Line	LLUB	Local Loop Unbundling
DSLAM	Digital Subscriber Line Access Multiplexer	Mbit/s	Megabits per second
FTTH	Fibre To The Home	ms	millisecond
GDP	Gross Domestic Product	NPV	Net Present Value
GSM	Global System for Mobile communications	OECD	Organisation for Economic Cooperation and Development
HSPA	High-Speed Packet Access	PC	Personal Computer
HSDPA	High-Speed Downlink Packet Access	PSTN	Public Switched Telephone Network
IDEN	Integrated Despatch Enhanced Network	SME	Small or Medium-sized Enterprise
		VDSL	Very-high-bit-rate Digital Subscriber Line
		VoIP	Voice over Internet Protocol
		WiFi	Wireless Fidelity
		WiMAX	Worldwide Interoperability for Microwave Access: IEEE802.16

Market intelligence services from Analysys Research

Analysys Research's online market intelligence services help you keep track of the latest developments in major telecoms markets worldwide. All our services are regularly updated and include a sophisticated range of interactive search, benchmarking and download tools.

- **Analysys Research Fixed Networks and Services** provides analysis of European operators and ISPs, country reports for 30 European markets, country market forecasts, commentary on industry trends, and a module on the broadband market.
- **Analysys Research Mobile Networks and Services** provides insight into the strategies of key players worldwide, country reports for leading mobile markets, 3G status reports, country market forecasts and analysis of industry trends.
- **Analysys Research Billing and OSS Markets and Customers** includes a searchable contracts database, trends papers covering the latest issues in billing and OSS, and profiles of leading and up-and-coming vendors worldwide.
- **World Telecoms Marketplace** is a leading source of company and contact information and includes thousands of records with data on company activities, financial and operating data, and contact details for senior staff.
- **Analysys Research Telecoms Systems Integrator Database** contains data on over 280 systems integrators, enabling equipment and software vendors to identify potential partners, competitors and acquisition targets in Europe.

Company search results

On this page you can view company profiles and ratings.

Searching the database on the following terms:

Customer: **British Telecom**

and Organization type: **Telecoms network operator**

and Products & services: **Cable TV**

Our Analyst Support package, which allows you direct consultation with our telecoms experts, is an ideal complement to your chosen market intelligence service.

For more information on our services or a guided demonstration, please contact our Sales and Customer Service team on +44 (0)1223 460600, email us at research@analysys.com or visit our Web site at <http://research.analysys.com>.

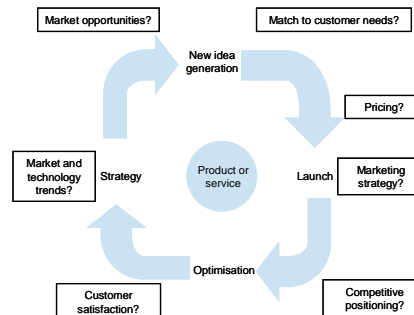

Custom Research: meeting your information needs

Analysys Research has developed its portfolio of Custom Research services in response to customer demand for bespoke market intelligence, when more data is needed than is found in an off-the-shelf report or database, when there are complex questions about specific companies or markets that need to be answered, or when analysis needs to be tailored.

Custom Research can deliver real value when an organisation needs to answer specific questions about how it is positioned in the market, and how to optimise performance at various stages of the product or service life cycle.

Understand how your company is positioned

Optimise performance in the product or service life cycle

In answering our clients' questions, we bring a wealth of understanding of markets, and of techniques and services including:

- desk research, data collection and interpretation
- benchmarking services
- quantitative and qualitative surveys
- market sizing and forecasting
- competitor and partner profiling
- white papers, presentations and workshop facilitation
- event and trend analysis
- procurement assistance.

For more information on Custom Research services from Analysys Research, or to discuss how we could help you to meet your specific information needs, please contact our Custom Research team on +44 (0)1223 460600 or email us at custom@analysys.com.

Analysys Consulting

Analysys Consulting is a leading¹⁰ international telecoms and digital media consultancy. We draw on our unparalleled industry experience to deliver results that enable our clients to compete and grow in these markets, as well as to exploit new opportunities.

Our experience, influence and unrivalled knowledge base are recognised globally – which is why we have been involved in some of the world’s largest telecoms projects and in transactions worth billions of dollars.

For more than 20 years, we have helped shape the telecoms industry through our extensive work on policy, regulation and finance. We have worked with most of the sector’s leading players, often at board level, to:

- determine strategy
- advise on merger and acquisition activity
- optimise tariffing of new and existing services
- identify and launch new business ventures
- improve profitability and cashflow by streamlining key operational processes.

Analysys Consulting services include:

- strategy and marketing
- pricing strategy
- scenario planning
- economic modelling
- due diligence
- licence awards
- mergers and acquisitions
- regulation
- interconnect
- spectrum pricing
- STEM (Strategic Telecoms Evaluation Model).
