

Operator business services: Netherlands forecast 2019– 2024

Igor Babić

Contents

5. Executive summary

- 6. Executive summary: the continued sharp fall in fixed voice revenue will drive a decline in operator business revenue in the Netherlands over the forecast period
- 7. Implications for operators

8. Forecast results

- 9. The fall in revenue from legacy services will drive a decline in total operator business revenue despite strong ICT services revenue growth
- 10. ICT, mobile data and mobile IoT connectivity services will account for an increasing share of operator business revenue
- 11. Operator revenue from businesses of all sizes will decline during the forecast period; this fall in revenue is expected to be the greatest from micro enterprises
- 12. The fall in revenue from voice and messaging will lead to a decline in mobile services revenue, in spite of solid data and IoT connectivity revenue growth
- 13. Operator revenue from fixed services will fall during the forecast period, primarily due to a further decrease in the number of voice connections
- 14. High-bandwidth services for both fixed broadband and dedicated connections will continue to grow in importance
- 15. Operators' addressable market for ICT services will continue to grow as businesses migrate further towards cloud-based solutions
- 16. Operator revenue from ICT services will form a rapidly growing share of the total operator business revenue

17. Operator profiles

- 18. Operator profiles: KPN
- 19. Operator profiles: VodafoneZiggo
- 20. Operator profiles: Deutsche Telekom (T-Mobile)

About this report

This report analyses the demand for telecoms services by micro, small and medium-sized enterprises (SMEs) and large enterprises, expressed in terms of revenue, the number of connections or users and average revenue per user (ARPU).¹

It highlights that operator revenue from business services in the Netherlands is expected to fall during the forecast period, driven by a continued sharp decline in revenue from fixed voice services.

It quantifies the market for fixed and mobile voice and data services, IoT connectivity services and ICT services such as unified communications (UC) and hosted voice, security, co-location and hosting and software-as-a-service (SaaS).

The report is based on several sources, including data from operators, Statistics Netherlands, the Authority for Consumers and Markets and Analysys Mason's 2019 survey on businesses' telecoms and ICT usage. We have not assumed a significant negative impact arising from the Covid-19 virus.

WHO SHOULD READ THIS REPORT

- Operators that want to identify key areas for revenue growth, both in terms of enterprise segments and individual services.
- Vendors that are considering targeting the enterprise market.
- Third-party service providers that are seeking to collaborate with operators.

The fall in revenue from legacy services will drive a decline in total operator business revenue despite strong ICT services revenue growth

We forecast that operators' retail revenue from businesses in the Netherlands will fall at a CAGR of –0.7% between 2019 and 2024 (primarily driven by a decline in fixed services revenue).

We estimate that operators' enterprise revenue from telecoms and ICT services in the Netherlands will fall from EUR3.4 billion in 2019 to EUR3.3 billion in 2024. This decline will be caused by falls in both revenue from fixed and mobile services. The growth in revenue from ICT services (such as SaaS, security solutions and co-location and hosting) will partially offset these declines.

Business revenue currently accounts for around a third of the total operator revenue in the Netherlands, and this share is expected not to change much during the forecast period. This share varies by operator, depending on their current market position and level of ambition for new services.

Business mobile services ARPU will continue to gradually fall towards that for consumer services (pricing pressure is particularly visible in the large enterprise segment of the market), and the number of business handsets will increase (this will primarily be driven by an increase in the number of employees in the Netherlands). We expect that business fixed services revenue will continue to decline more rapidly than consumer revenue, driven by migration away from legacy voice and price pressure in data services, particularly as the quality of cheaper consumer-grade products improves.

Figure 4: Telecoms operator retail revenue from businesses by service type and share of total market, Netherlands, 2015–2024¹

Source: Analysys Mason

¹ Revenue from consumer products is excluded from our business revenue estimates, in line with operator reporting practice.

² See the 'Presentation of results' slide in the 'Forecast methodology and assumptions' section of this report for full definitions of the aggregate categories presented in the figures.

About the author and Analysys Mason

About the author

Igor Babić (Analyst) is a member of Analysys Mason's Operator business services and IoT research practice and the lead analyst for the company's Cyber Security research programme. He mainly focuses on developing market forecasts for business telecoms, IoT and ICT services, and on analysing industry trends within the cyber-security space and route-to-market strategies of security vendors selling to small and medium-sized businesses (SMBs). Before joining Analysys Mason, Igor completed a BEng in Engineering Business Management at Warwick and an MPhil in Industrial Systems, Manufacture and Management at Cambridge.

Analysys Mason's consulting and research are uniquely positioned

Analysys Mason's consulting services and research portfolio

Consulting

We deliver tangible benefits to clients across the telecoms industry:

- communications and digital service providers, vendors, financial and strategic investors, private equity and infrastructure funds, governments, regulators, broadcasters and service and content providers

Our sector specialists understand the distinct local challenges facing clients, in addition to the wider effects of global forces.

We are future-focused and help clients understand the challenges and opportunities new technology brings.

Research

Our dedicated team of analysts track and forecast the different services accessed by consumers and enterprises.

We offer detailed insight into the software, infrastructure and technology delivering those services.

Clients benefit from regular and timely intelligence, and direct access to analysts.
